INTRODUCTION

The figures compiled in this report have been derived from a community population census undertaken in June, 1985, for the remote and unorganized Northern Manitoba communities which fall under the jurisdiction of the Minister of Northern Affairs. The Northern Affairs census was first taken in 1978 and reported again in 1982.

The census count was conducted on a house-to-house basis in 53 remote settlements by local enumerators chosen by their respective councils/committees.

The census was conducted in basically the same manner in each settlement. Only persons residing within the recognized boundary of the community are included in the census. Five additional communities are included in the 1985 census. These are Powell, Dawson Bay, Oxford House, Poplar River and Bloodvein.

In each community the census results were reviewed by three parties: the enumerator(s), the council/committee and the Northern Coordinator. The council/committee resolutions then formalized the acceptance of the community populations.

The purpose of the Department of Northern Affairs census was to provide an alternative to the Statistics Canada population figure for the 53 settlements, as it had been determined in 1978 that the Statistics Canada figures were inadequate for the Department's requirements.

The population data for 1982 has been included in this report to allow easy identification of changes occurring in each community over the four-year period between censuses. In addition, a review of the basic data for the three periods, 1978, 1982, 1985 is included for comparative purposes.

The processing and the statistical analyses appearing in this report have been compiled by the Department of Northern Affairs.

EXPLANATORY NOTES

During the processing of the northern census, it became evident that some judgement decisions would have to be made with regard to some of the survey information.

Most important was the location of the residences of the residents claiming allegiance to the community. In some cases, notably Oxford House, Easterville and Nelson House, some of the residents live on the adjoining Indian Reserve land. As one of the main purposes of the census was to count populations for the purpose of allocating tax-sharing grants, it was essential to count only those people living within the community boundaries. Those living on the Reserve are counted in Reserve populations for the purpose of allocating these tax-sharing grants and therefore if they had been counted in the community, grants would have been paid twice for those people living on the Reserve. The populations of all communities reflect the number of residents living within the recognized community boundaries. Census detail as to ages and sex for Pikwitonei were lost and 1982 data has been used. The figure for the total population was retained and is 210 which shows an increase of 9 over the 1982 census figure.

A new feature included in the analysis this year is a comparison of populations by selected age groups obtained in the census years; 1978, 1982, 1985.

SUMMARY OF ANALYSIS OF CENSUS DATA

Census data for 1985 includes information about 4 northern communities, Powell, Dawson Bay, Bloodvein and Poplar River, which were not included in the 1982 census. Total population of this group of communities at the time of the census in June was 184 and they increased the population of communities under the jurisdiction of the Department of Northern Affairs to 9,946 persons. This is an increase of 238 people over the 9,708 reported in the 1982 census. When the 184 people from the newly reporting communities are deducted from the total, the population of the original 49 communities only increased by 54 persons between census years. Over the 3 census year periods, the population has varied by less than 250 people.

The percentage of the population under the age of 15 years has continued to drop, while the labor force population, with the exception of The Pas region remains more or less constant. The labor force in The Pas region has increased by more than 2 percentage points.

STATISTICAL ANALYSIS OF CENSUS DATA
